DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-23, drawn to a method of improving the operating efficiency of a fuel cell, classified in class 429, subclass 26.
 - II. Claims 24-30, drawn to a fuel cell system, classified in class 429, subclass 30.
 - III. Claims 31-35, drawn to a portable electronic device, classified in class 713, subclass 300.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the process as claimed can be practiced by another materially different apparatus or by hand. More particularly, the process can be practiced by a fuel cell that does not generate heat wherein the fuel cell comprises a first cell compartment for containing a first fuel component; a second cell compartment for containing a second fuel component; and a membrane electrode assembly disposed between the first cell compartment and the second cell compartment for activating at least one of the first and second fuel components to generate electricity; a fuel replenishing unit

Art Unit: 1745

for storing the first component; and a fuel conduit, operatively connecting the fuel replenishing unit and the fuel cell, for conveying the first fuel component from the fuel replenishing unit to the fuel cell.

3. Inventions II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the fuel cell in the subcombination as claimed for patentability. The subcombination has separate utility for generating electricity for use in an automobile or for household use.

4. Inventions I and III are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the apparatus as claimed can be used to practice another and materially different process such as to provide an electricity for use in operating an automobile without a heat removal means.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement may be traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
